

Pocket PC

Technology the easy way!

We want your life as a Your Cleaner franchisee to be organised, efficient and as simple as possible which is why we all use a pocket pc (really just a big mobile!)

We supply (+ setup and train you to use) with a brand new pocket pc that has a mobile phone built in. You can put your sim card from your current phone into the pocket pc and it is up and running! (You can stay with your current mobile phone provider)

The pocket pc connects to the internet wirelessly to help us communicate!

When we book a job for you or send an email, the information goes instantly to your pocket pc. The same works when you send us information. It is an important part of our commitment to eliminate paper from the business and to help you work smarter rather than harder.

Jobs show automatically in real time so you know exactly when your next job is. You can use your finger to tap the screen and the appointment will show all information regarding the customer.

Here are some of the ways we use it on a daily basis:

- All jobs are sent to you wirelessly and instantly – a little reminder will tell you when something has changed or you have a new job.
- We communicate to each other via email wirelessly & you can send them to friends and family too
- Accounts, newsletters and other information is sent to the device
- All of your customer contact details are stored securely on it allowing you to find information about customers wherever you are.
- It's your mobile telephone – you can use it how you like of course but it's a handy tool for calling the office & customers.

Your pocket pc works as an everyday mobile phone and mobile email device with the added benefit of a calendar that is always up to date! If you are uncomfortable with technology, don't worry.... there isn't really anything to learn. All you need to do is be able to turn it on and off and the information is on the front screen.
